**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 7-13 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Xue et al (US 6,174,605).

Xue et al disclose the method for producing a construct comprising the steps of supplying a joint compound, wherein the joint compound contains metal, applying the joining compound to opposing surfaces of the object, carbon composite parts, heating the joint compound at 0.5 Tm (Tm is the melting point of the lowest melting point constituent) (col. 2, lines 29-36), applying pressure of more than 500 psi (col. 4, line 49) to bond the construct. The joint compound is applied to a thickness is at least five times the dimension of the largest particles contained in the joint compound (col. 2, lines 7-9).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1725

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Xue et al (US '605).

Xue et al disclose the claimed invention above in paragraph 2, but lacks the disclosure of the joint compound is 65 percent or more by volume of a phase that exhibits superplastic flow at the heating temperature.

However, Xue et al disclose a preferred temperature, similar to applicant's disclosure, to heat the joint compound and applying a preferred pressure, similar to applicant's disclosure, in order to exhibit superplastic flow of the joint compound.

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention that the range of Xue et al would correspond to a 65% or more by volume of a phase that exhibit superplastic flow.

***Response to Arguments***

6. Applicant's arguments with respect to claims 7-13, 25 and 26 have been considered but are moot in view of the new ground(s) of rejection.
